## **The Theory Of Enablement And**

Enablement theory addresses interrelationships among functional constructs at different levels of the International Classification of Functioning, Disability, and Health (ICF). That is, enablement theory acknowledges that complex functions are multiply determined, and seeks to model these complex interrelationships.

Usually, the cost advantage organizations are looking to have is on the order of 50%-75% of domestic rate. Reality, however, can paint a much more complicated (and much less encouraging) picture where the precious numbers may actually cost us dearly, unless certain focused effort is applied in that regard.

Positive. As a positive term, "enabling" is similar to empowerment, and describes patterns of interaction which allow individuals to develop and grow. These patterns may be on any scale, for example within the family, or in wider society as "enabling acts" designed to empower some group, or create a new authority for a (usually governmental) body.
